

Online interactive session with Dr. Avinash Prabhu

On 22nd November, the students of Aryaan Mushtifund had the great opportunity to meet a legendary Alumni, Dr Avinash Prabhu, the first student of our prestigious school to join IIT Bombay.

Dr Prabhu started off this session by telling us about his priceless experience at the best rated college in the country, IIT Bombay. He put emphasis on trusting our efforts in order to gain success. He told us about the many benefits u get to being an IITian, for instance, the excellent work ethic, and the fantastic alumni network that you receive in order to gain success in your career.

Dr Prabhu stressed on the importance of being independent, which is something that will help us even when we are IITians and even in the very important stages of our preparations for competitive exams.

Dr Prabhu told us about his career at tesla, where he was presented with a “200 million dollar” question, regarding the heat efficiency of the battery, placed at the bottom, because of the heating and cooling process, which was made cumbersome and even the use of lighter elements lead to problems with heating in the car.

Dr. Prabhu also told us how Tesla has become one of the safest cars in the world, shifting its weight toward the rear part of the car and leaving the front to take the crash, reducing the momentum transferred to the passengers in the car. He also told us about the various methods that he devised with Tesla to reduce the costs in the car.

Dr Prabhu told us about the various methods used by tesla to reduce time consumption by maximizing the synergy between the various forums and assets that went into the building of Tesla.

It was all due to our principal, Mr Vyankatesh Prabhudesai who brings us various different personalities to speak to and take inspiration from during our preparation for competitive exams.

We would like to thank Dr Avinash Prabhu for this inspiring session where we learnt so many things about different aspects of life as well as what goes into making of a huge company Tesla.
